Countermeasure Data Management System (CDMS)
Release Notes

Release Date: January 30, 2021
Release Number: 7.5.0A

CDMS is a software application located on the New York State Department of Health (NYSDOH) Health Commerce System (HCS). The application provides local, regional, state health departments and tribal nations with a single data reporting tool that may be used regardless of the hazard or agent during a public health incident or event. Public health organizations across the state use CDMS to capture recipient demographic and visit information related to the distribution of countermeasure (e.g., immunizations, antibiotics, personal protective equipment) during clinical operations, community reception centers during a radiological incident, or in support of documentation needs during public health emergency preparedness exercises. Vaccination data entered in CDMS can be uploaded to the New York State Immunization Information System (NYSIIS) if needed.

The CDMS application also provides a mobile-friendly public registration site for users to register for events online (http://www.health.ny.gov/gotoclinic).

Enhancements:
- Added ability to edit Registration Demographics information ahead of screening/visit process
- Added Race and Ethnicity to the All Data report available under the HIPAA reports section
- Updated the Registration Demographics report available under the HIPAA reports section
- Updated the Recipients Scheduled report under the General Reports section

Bug fixes:
- Fixed issue with column headers in HIPAA All Data report
- Fixed issue in Reports with inconsistent counts between on-screen results and CSV extracts
- Fixed issue with export of data for large volume reports
